

One Indicator for Two Seasons; Planting and Harvesting

Accurate planting and harvest data to improve your bottom line and the efficiency of your operation.

Avery Weigh-Tronix's Field Foreman software for the 3060 touchscreen indicator provides a single solution for your planting and harvesting needs.

3060 Touchscreen Indicator WITH FIELD FOREMAN SOFTWARE

The advanced 3060 Indicator features a touchscreen interface for full control of the Field Foreman software. This data management solution consists of Field Foreman software with planting and harvesting apps for the 3060 and the Field Foreman PC program. This unique software program has powerful data collection and export capabilities.

INDICATOR PLANTING APP

- › **Track individual hopper/probox weights:** Track up to eight individual hopper or probox container weights for your seed tender with the existing single scale system.
- › **Easily fill planter hoppers evenly:** Enter custom capacity information for each planter on your operation to fill evenly or to your desired customized capacity.
- › **Reduce seed cleanout** and eliminate risk of running out of seed
- › **Measure seed used between farms and partnerships:** Knowing how much seed has been used is vital to ensure your farm is running at optimum efficiency. The Field Foreman planting app allows you to easily measure the seed used across farms and partnerships at a click of a button.
- › **Easily track Hybrid type and Hybrid lot number by field:** Notes on hybrid selections can be stored in the Seed tender application,

allowing you to make decisions that lead to higher yields and profits.

- › **Easily calculate planter target load size** by entering in acres and seeds per acre
- › **Custom alerts avoid overfilling:** Set an alarm to automatically sound and the screen to flash once half way point is met when loading a 2 hopper planter.
- › **Easily track which seed treatments where used by field:** With the ability to select from a list of user defined seed treatments and fields, knowing which treatments where used for each field combined with Field Foreman's harvest data provides valuable information.
- › **Optional Smart Gate feature:** SmartGate is an optional kit which can control a seed tender's electric or electric over hydraulic auger gate or auger. Once a target gross weight is reached, SmartGate automatically sends out an output to stop the auger or close the gate, helping to eliminate human error and potential overloading.
