Portable Platform Scale System

The dependability of a full length truck scale for a fraction of the cost!

The Portable Platform Scale is an economical solution to weigh truck axles, single or tandem. Level stationary scales have an accuracy within .05%. Level mobile scales (wheel applications) have an accuracy within 1%. Two weights are required for a straight truck, three weights for a semi-truck. The scale comes in multiple sizes, the most common are 10' x 14', 10' x 12', 10' x 10' and 10' x 8'. This system provides a Gross/Tare/Net Weight printed ticket. The ticket includes a Truck ID, Time, Date, and Weight indication.

915 Indicator

The 915 is easy to use. This indicator produces total, empty, and payload weights to be printed as a gross/tare/net weight ticket. The printed ticket tracks the Truck ID, Time, Date & Weight. When using the 915, the operator can view grain storage weight coming in and out of the bin. The 915 helps avoid overloading trucks and can save time by weighing in the field.

Printer Options

The compact TMU 295 Ticket Printer (pictured left below the 915) provides several font capabilities as well as a user-friendly touch panel. It has a quick grip and release button for simple ticket entry printing.

The CP 130 Printer (pictured right of the TMU 295) provides an easy to use thermal paper print out. No ink ribbon is needed. The operator just replaces the scroll and goes.

Scoreboard Remote Display

The 4" tall Scoreboard remote display features bright red LEDs to clearly show scale data in any lighting condition. The serial port interface and auto learn feature make connecting to an indicator a snap.
