

Grain Cart Weighing and Data Management

A PRODUCT OF
BITSTRATA
SYSTEMS INC.

Agrimatics Libra defines a new paradigm for harvest data management.

The Libra device and app work together to create a full-featured grain cart weighing and data management system. Libra's **patent pending technology** automatically detects how much grain has been harvested, and allows remote users to view grain cart data on their smartphone, tablet or computer.

APP-BASED SCALE INDICATOR

The **Libra app** displays the harvest data on a tablet or smartphone, replacing any existing scale indicators, freeing up valuable space in the cab. 

EASY INSTALL AND SET-UP

The Libra device mounts directly to the grain cart, and connects to any industry-standard load bars. A compatible smartphone or tablet, running the Libra app, **wirelessly connects** to the device, reducing cables between the grain cart and tractor. The app simplifies the calibration process, eliminating hand calculations, and is designed so that untrained personnel are operational in minutes.

SIMPLY ACCURATE

The **unload detection** feature automatically ensures every load is accurately tracked. The **display smoothing** feature stabilizes the weight when driving over rough terrain, providing the most accurate reading at all times.

REMOTE MODE

An **unlimited** number of remote users can view the live weights within a range of 400 feet of the Libra device.

BUILT TO LAST

The Libra device is **weather proof**, and is designed to withstand extreme temperatures and high vibrations. 

DATA IN THE CLOUD

Data can be shared through email and opened with standard spreadsheet software, eliminating the need for printers, log books or USB flash drives. The optional **Agrimatics™ Aero** cloud service **keeps data secure**, and provides access at anytime, from anywhere. **Over-the-air updates** let the operator upgrade the app and device software right in the field, always taking advantage of the latest features.

ENERGY EFFICIENT DESIGN

The Libra device **outlasts** the harvest season on a single battery, so it is always ready.

"I've really enjoyed using the app. It's made harvest life much, much easier. Worth every penny." - Zach Hunnicutt, NE

The **first** tablet and smartphone-based grain cart weighing and data management system

My life has been so much easier and more accurate."
- John Friesen, Elm Creek, MB

"The accuracy of the readings were as close as they could possibly be."
- Carmen Sterling, Weyburn, SK
