Next Generation Ration
and Data Management

FEATURES

Simplified Ration Management

Precisely track each ingredient in the mixer and what has been fed to each pen in a feed group.

Resize

Automatically adjust a ration's batch size based on any loaded ingredient.

Mixer Timer

Set a custom timer after each ingredient and after the entire ration has been loaded.

Weighback

Track feed refusal by loading it back into the mixer as part of the next ration, accounting for each ingredient.

Feedings

Divide rations into multiple feedings per day (Ex. Morning 50%, Evening 50%).

Unlimited Remote Displays

View and tare live weights from multiple mobile devices within 400 feet of the mixer.

Feed Adjustment

Adjust the lb/head for a specific pen in a feed group without having to create a new ration.

Dry Matter/As Fed

Set the app to build and feed rations on a dry-matter or wet-weight basis.

Bunk Reading

Enter an amount from a specific pen to subtract from the next load, to account for feed refusal.

Data Sharing

Share TMR data through email and open with standard spreadsheet software. Cloud support through Agrimatics Aero coming soon!
